Guardian Token

Whitepaper

What is the Guardian Token?

The Guardian Token is the digital asset that represents the **Guardian Platform**. The Guardian Platform is a dynamic collection of fully integrated resources, utility, and information designed to provide the cryptocurrency and digital asset industry with a user-centric solution portal. It is focused on **providing users with the utilities, tools, and resources we need to execute our individual crypto strategies**.

Guardian's "Honeycomb"

Users who visit the Guardian Platform at www.GuardianPlatform.io are greeted by a honeycomb design of logos. Guardian's **Phase 1 honeycomb** is comprised of individual components that represent specific utilities, tools, or links to external crypto projects that provide unique features or services. Hover-over text displays the name of the component, and if the component is not yet fielded the name will include a delivery timeline estimate (example, Q3). The displayed Phase 1 honeycomb is just the beginning of the platform being designed for crypto and digital asset users.

Whitepaper

Our Philosophy:

Our philosophy at Guardian revolves around five “high-conviction” principles that drive our mission, objective, and goals. These five principles serve as our compass.

1. We are in the early stages of cryptocurrency and digital asset development.
2. Users are the driving force behind adoption.
3. This industry succeeds when users have the tools to execute their strategies.
4. We are stronger together.
5. Integrate everything.

Mission:

Provide a dynamic and integrated platform of utilities, tools, and solutions that allow users to plan, execute, monitor, and refine their own personal cryptocurrency and digital asset strategies.

Objective:

Our objective is to provide users with varying levels of experience a single platform that contains a broad collection of popular and valuable solutions and resources.

Goals:

1. Work with industry leaders and projects to evaluate and refine existing utilities that provide users with valuable information and tools.
2. Launch surveys and feedback forms to determine which existing tools earn their highest levels of confidence and usage.
3. Launch surveys and feedback forms to determine where solution gaps exist within the cryptocurrencies and digital asset industry.
4. Identify and prioritize the integration of existing solutions and the development of new solutions based on user needs, emerging technologies, and industry trends.
5. Remain focused on users needs throughout platform design, development, integration, and fielding.

Guardian Token

Whitepaper

Component Development:

The Guardian Platform had 12 initial internal components that were derived from user surveys, feedback forms, and ArchAngel Token's Innovation Lab. These 12 components represent the first wave of desired utility for the Guardian Platform.

Name	Logo	Description
Token Data		Live market prices and data
Marketer's Hub		Marketer & Influencer library
BrainStem (T)		Exclusive crypto & digital asset video library
Market News		Live market crypto & digital asset news
Global Xchange		Live global crypto exchange data
Scratch Engine (T)		NFT value assessor and evaluator
Sharity (T)		Charitable organizations that accept crypto
Herald		Official project announcement board
Whale WatchR		Track big wallet activity in your projects
Spydr (T)		User and project-centric security
BagTrax		Crypto portfolio builder and value tracker
Risk Assessment		Personal risk assessment and evaluator
Token Strength		Token strength based on specific criteria
GenaLock		Securing wealth for future generations

T: ARCHA Ecosystem Project being developed by an internal Project Team

T: Project being developed by an external Project Team

Additional platform components have already been added to this list, and another 13 components are already stacked up in the wings waiting for priority assignment.

Guardian Token

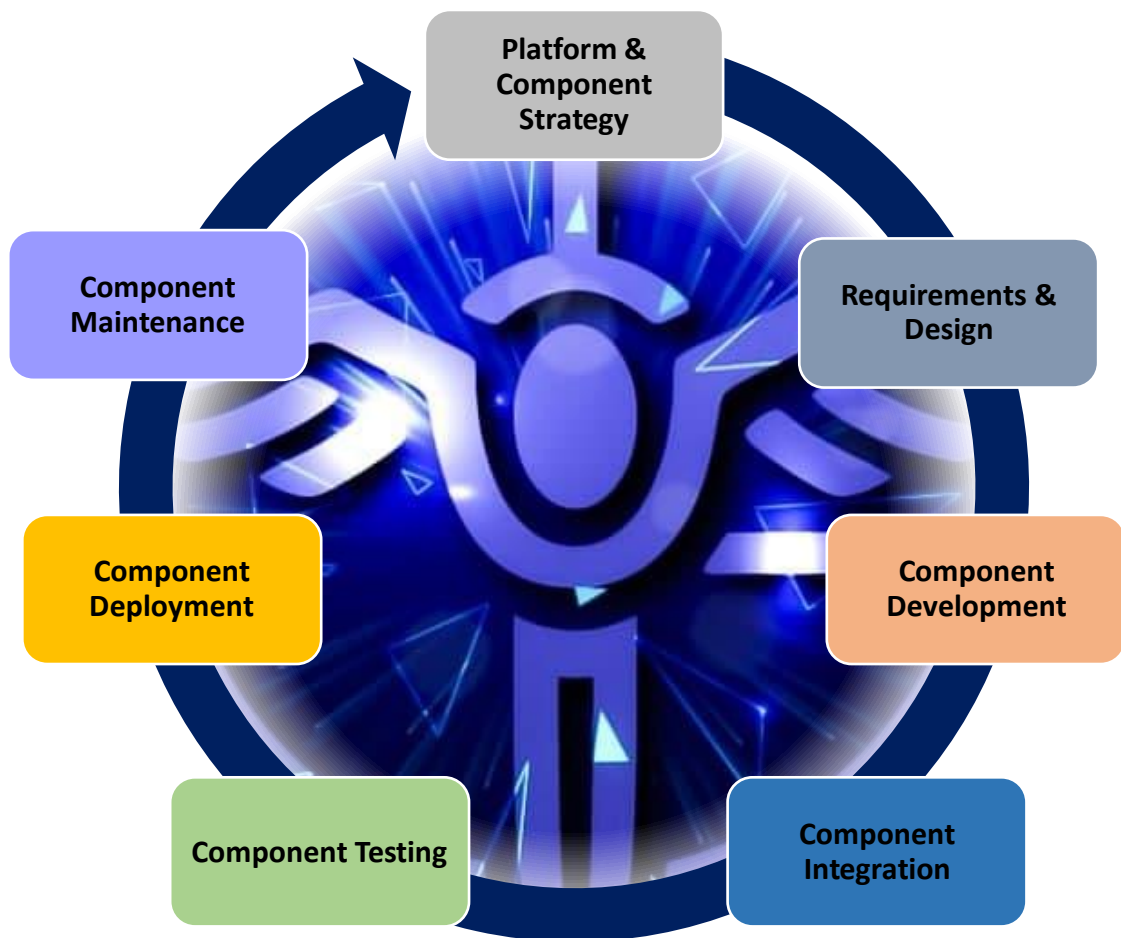

Whitepaper

Phase 1 Development:

Every component within the Guardian Platform follows a regimented development cycle based on industry standards and best practices. This phased approach through the software development lifecycle (SDLC) is fused with an agile development methodology. The combination of standard practices and an agile DevOps approach ensures that:

1. We can manage changing priorities in a rapidly advancing industry.
2. Collaboration between users, the project team, and developers is maximized.
3. Alignments and adjustments are made in smaller increments and more frequently.
4. We increase our speed of delivery.
5. The team is maximizing their productivity.

Guardian Token

Whitepaper

Component Maturity:

The objective for Phase 1 is for each component to execute individual sub-phases which follow a progressive design, development, and integration process based not only its individual component needs, but also based on integration and data dependencies throughout the platform. This maturity process is depicted below using Guardian's Token Data component.

	Phase	Description	Finish Target	Status
	1.0	Solicit user feedback and input	Oct 2021	Done (On Time)
	1.1	Research & Industry Analysis	Nov 2021	Done (On Time)
	1.2	Initial token data list & configuration	Jan 2022	Done (On Time)
	1.3	Initial individual Token Data pages	Feb 2022	Done (On Time)
	1.4	Integration with Global XChange	Apr 2022	Done (Early)
	1.5	Token Price Change Indicator feature	May 2022	Done (Early)
	1.6	Extend prices 12 positions (.000000000000)	June 2022	Started (Early)
	1.7	Extended token list & update pages	July 2022	Next

Whitepaper

Component Integration:

Integration planning is one of the first and most important considerations taken with each component, utility, or solution being developed for the Guardian Platform. This step (Page 6, “Platform & Component Strategy”) is critical not only to the individual component, but also to other components within the Guardian Platform which require integration based on user needs and/or data or utility dependencies.

In order to integrate properly, the project team takes the time at the beginning of the process to review the platform’s overarching strategy, the technical requirements, various data dependencies, and the desired phasing of component development.

Phase 2 Component Integration Mapping													
Name	Logo	Description	Component Integration										
Token Data		Live market prices and data											
Marketer’s Hub		Marketer & Influencer library											
BrainStem (T)		Exclusive crypto & digital asset video library											
Market News		Live market crypto & digital asset news											
Global Xchange		Live global crypto exchange data											
Scratch Engine (T)		NFT value assessor and evaluator											
Sharity (T)		Charitable organizations that accept crypto											
Herald		Official project announcement board											
Whale WatchR		Track big wallet activity in your projects											
Spydr (T)		User and project-centric security											
BagTrax		Crypto portfolio builder and value tracker											
Risk Assessment		Personal risk assessment and evaluator											
Token Strength		Token strength based on specific criteria											
Genalock		Securing wealth for future generations											

The steps taken revolve around:

- Evaluating existing architecture
- Examining data models
- Designing, developing, and testing the interfaces
- Connecting the components
- Normalizing the data
- Prioritizing the flow of data
- Creating custom sequences or triggers (if/then)

Integration is not something that just happens on its own. It is deliberate, time-consuming, challenging, and process-driven.

Whitepaper

Built with a Long-Term Strategy:

The Guardian Platform and the Guardian Token were built with longevity in mind. We hired the best blockchain and cryptocurrency attorneys in the US to set up the legal structure well in advance of token launch:

- Guardian Platform is a US-based LLC in the state of Delaware. The LLC manages the costs and maintenance of the platform infrastructure, servers, and the platform's development contracts. Token assets are not owned by Guardian Platform LLC and those token assets remain on the blockchain.
- Registered with the IRS and received our EIN.
- Registered with the SEC with EDGAR access.
- Hired our full-time project team which includes a Project Manager, Enterprise Manager, and Web Content Manager. Additional full-time & part-time positions will be added as the platform grows. The project team executed KYCs with SolidProof.
- In addition to the full-time project team, Guardian Platform also utilizes an Enterprise Support Team which includes personnel with various skills and expertise from a broad range of related fields and professions.
- Guardian's Smart Contract was delivered to SolidProof for a pre-launch audit. There were zero critical findings, zero high findings, zero medium findings, five low findings, and two informational findings.
- 20% of Guardian's Tokens are being delivered to Uniswap for the ICO. Guardian Token will be working towards listing on other major exchanges, and nearly 40% of Guardian's total supply has been reserved for those future moves to major exchanges and trading platforms.
- Tokenomics and taxes are designed to support the continued development and growth of the platform as well as retain flexibility to form strong and lasting partnerships. This is a critical aspect to the growth potential of the platform.

Contacting the Project Team:

- The project team visits the social sites and engages with community members, but the best way to contact the project team is via email, as shown on the website:
 - Official@GuardianPlatform.io – general topics and official communications
 - Mhub@GuardianPlatform.io – used for the Marketer's Hub
 - Support@GuardianPlatform.io – report technical or access issues
 - Advertising@GuardianPlatform.io – for advertising information and support

Guardian Token

Whitepaper

Project Artifacts and Official Information:

Project artifacts are displayed on the official website at www.GuardianPlatform.io.

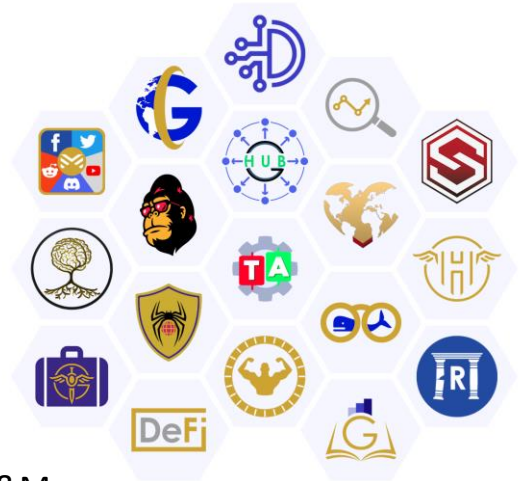

Tokenomics & Taxes:

- A deflationary ERC20 token:
 - Name: Guardian
 - Symbol: Guardian
 - Decimal Places: 18
- 100 Trillion total supply
- 5% burned at launch
- 20% delivered to Uniswap for ICO
- 37% reserved in Multi-Sig for future exchanges
- 5% total transaction tax on all buys and sells:
 - 1% burn on all buy and sell transactions
 - 2% reflections to Guardian holders
 - 2% Multisignature wallet for marketing, ARCHA Staking, liquidity/buybacks, and O&M
- 0% tax on transfers
- Recommended Slippage: 5%-7% during normal transaction volume

Maximize Your Crypto Experience

At Guardian Platform, we are focused on creating the perfect integrated solution for cryptocurrency and digital asset investors, projects, analysts, and enthusiasts. Use Guardian to plan, execute, and monitor your digital assets. The initial components shown below are being developed and released as soon as initial usable functionality is available. Each component will continue through multiple development phases as outlined within our Whitepaper.

We are actively collaborating with other projects and companies within numerous industries and sectors to explore, develop, and integrate new solutions into our platform. This is just the beginning. Let's build this platform together and maximize our crypto experience.

Contract Address:

Guardian's smart contract address is: 0x16c525c7cd751c19adf26f39118154d7c4bd0088

Initial Offering:

Guardian's ERC20 token is available on Uniswap. The link is provided on our website.

Socials:

Guardian's social media presence will expand with project growth. At launch, the project utilizes Telegram as its primary social platform along with Twitter.
